

VFW 1 – ANGULAR MILLING HEAD:

The VFW 1 Milling head is applied for light milling operations on small surfaces or for milling both external and internal slots which parallel with main spindle axis. It is also suitable for drilling small holes and, with special tools, for other operations such as production of internal clutch claws, internal splines and similar.

The Milling head is capable of being swivelled by hand, to different angular positions through 0-360° to a scale provided. After adjusting the required angular position the Milling head is firmly fixed to its extension mount.

VFW1 – ANGULAR MILLING HEAD	Description
Spindle Nose	ISO 30/ISO 40
Maximum Size of Cutter	30 MM
Power	7.5 – 10 KW
Maximum Torque	180 NM
Speed	1000 RPM
Extension Length	1200 MM
